                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 27, Application US/10223172A

Sequence 27, Application US/10223172A

Publication No. US2003013844A1

GENERAL INFORMATION:

APPLICANT: Myriad Genetics, Inc.

APPLICANT: Zavitz, Kenton

APPLICANT: Wettstein, Daniel Albert

APPLICANT: Worham, Scott

APPLICANT: Morham, Scott

APPLICANT: Hobden, Adrian

TITLE OF INVENTION: COMPOSITION AND METHOD FOR TREATING HIV INFECTION

FILE REFERENCE: 5003.01

CURRENT APPLICATION NUMBER: US/10/223,172A

CURRENT FILING DATE: 2002-08-19

PRIOR FILING DATE: 2001-08-18

NUMBER OF SEQ ID NOS: 42

                                      Sequence 10, Application US/08944604

Patent No. 6218131

GENERAL INFORMATION:
APPLICANT: KEESEE, SUSAN
APPLICANT: OBAR, ROBERT
APPLICANT: OBAR, ROBERT
TITLE OF INVENTION: MATERIALS AND METHODS FOR DETECTION OF
TITLE OF INVENTION: BREAST CANCER
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
ADDRESSEE: Testa, Hurwitz & Thibeault
STREET: 125 High St.
CITY: Boston
STATE: MA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 40, Application US/08556597

Fatent No. 5877155

GENERAL INFORMATION:

APPLICANT: Miller, Jonathan L.

APPLICANT: Lyle, Vicki A.

ITILE OF INVENTION: MIMOTOPES AND ANTI-MIMOTOPES OF

TITLE OF INVENTION: HUMAN PLATELET GLYCOPROTEIN Ib/IX

NUMBER OF SEQUENCES: 173

CORRESPONDENCE ADDRESS:

ADDRESSEE: Nixon, Hargrave, Devans & Doyle LLP

STREET: Clinton Square, P.O. Box 1051

Patent No. 5885965

GENERAL INFORMATION:

APPLICANT: Oppenheim, Frank G.

APPLICANT: Spacciapoli, Peter

APPLICANT: Roberts, F. D.

APPLICANT: Friden, Philip M.

TITLE OF INVENTION: Anti-Fungal D-Amino Acid Histatin-Based

TITLE OF INVENTION: Peptides

NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:

ADDRESSEE: Hamilton, Brook, Smith & Reynolds, P.C.

STREET: Two Militia Drive

CORRESPONDENCE ADDRESS:

ADDRESSEE: Lexington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1; Indels

Patent No. 6329509

GENERAL INFORMATION:

APPLICANT: Jardieu, Paula M.

APPLICANT: Jardieu, Paula M.

APPLICANT: Presta, Leonard G.

TITLE OF INVENTION: Immunoglobulin Variants

FILE REFERENCE: P0718P2C1D1

CURRENT APPLICATION NUMBER: US/08/466,163B

CURRENT FILING DATE: 1995-06-06

PRIOR PPLICATION NUMBER: US 08/405,617

PRIOR APPLICATION NUMBER: US 08/185,899

PRIOR FILING DATE: 1995-03-15

PRIOR FILING DATE: 1992-05-07

PRIOR FILING DATE: 1992-05-07

PRIOR FILING DATE: 1992-05-07

PRIOR FILING DATE: 1991-08-14

NUMBER OF SEQ ID NOS: 64

SEQ ID NOS: 64
               FILING DATE: 15-MAR-1995
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 08/185899
FILING DATE: 26-JAN-1994

The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                            Cyclophilin B; human; tumour antigen peptide; cytotoxic T-cell; CTL; HLA antigen; diagnosis; tumour; therapy.

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                              Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.

                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

This invention describes the novel use of interferons (IFNs) or DNAs capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigeners or peptides, in the manufacture of an agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IFN-alpha) in a system for inducing specific cytotoxic T cell (CTL) by administering an antigenic peptide in an incomplete Freund's adjuvant (IFA) emulsion preparation form was evaluated. IFNs (or DNA encoding IFNs) are useful in the manufacture of a medicament for inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                 infectious disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tumour specific cytotoxic I lymphocytes (CTL). The peptides recognising cancer cells with tumour specific CTLs are selected from: (1) peptides of sequences (AAG68066 to AAG68069); (2) peptides containing the above mentioned sequences; (3) peptides having 70 % or more of homogeneity with the above mentioned sequences; and (4) peptides with one or more deleted, substituted, added or inserted amino acid(s) of the above mentioned sequences, particularly those having recognising property due to HLA-A2402 binding CTL, especially having at least 5 amino acids, used for medicine, particularly anticancer agents, derived from antitumour antigenic peptides of 1ck, src family, SART-1, SART-3 or cyclophilin B genes. The antitumour peptides have cytostatic activities. The peptides are used for the treatment of cancer. The peptides cause activation of the present invariant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New peptides for recognizing cancer cells with tumor specific cytotoxic T lymphocytes and for treating cancer.
         (or
Freund's adjuvant (IFA) emulsion preparation form was evaluated. IFNs (c DNA encoding IFNs) are useful in the manufacture of a medicament for inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral infectious disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antitumour; cancer; cancer cell recognition; antigenic; CTL; lck; src; tumour specific cytotoxic T lymphocyte; anticancer; SART-1; SART-3; cyclophilin B gene; HLA-A2402.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes peptides recognising cancer cells with

```
cell and a cell penetrating peptide (CPP) associated with an antigen or antibody. Also included are (1) a vaccine comprising (I), CPP associated with an antigen, and a pharmaceutically acceptable carrier and (2) preparing a composition for a disease, by providing (I) and CPP associated with an antigen for disease, and introducing the antigen-sessociated CPP to (I), where antigen enters into the cell. The antigens or infiltrating lymphocytes (TIL) of HiA (human leukocyte antigen) class I or II. The composition is useful for enhancing immunity in an animal to a disease, by administering a mature dendritic cell comprising CPP associated with an antigen to disease, to the animal, such that following the administration, animal is protected from disease, where the animal comprises both CD4+ and CD8+ T cells. It is also useful for treating a disease (c) cancer, tumour, melanoma, lymphoma, uterine cancer, non-Eddgkin's lymphoma, leukaemia, Hodgkin's lymphoma, uterine cancer, cervical cancer, bladder cancer, kidney cancer, adenocarcinoma, cradiation, chemotherapy or gene therapy. The administration of (I), rediation, chemotherapy or gene therapy. The administration of (I), rediation, chemotherapy or gene therapy. The administration of (I), the cancer treatment. The present sequence is a tumour antigen derived epitope for inclusion in the composition of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a composition (I) comprising an immune effector

The invention relates to a method for the detection of antigen specific T-cells in a blood sample involving the use of a plurality of antigenic peptides. The method comprises sampling of peripheral blood monocytes; stimulation of the collected peripheral blood monocytes with antigens without direct use of antigen presenting cells; and detection of T-cells specific to the antigen in the stimulated monocytes. The method is particularly used for the detection of cancer as it can be used in semi-quantitative determination of cancer specific T-cells. It can also be used for cancer vaccine therapy for patients with cervical or prostate cancer. The method can additionally be used to monitor of cellular immunity and cancer immune therapy by detection of specific T-cell frequencies. Sequences ABR84367-ABR84380 represent HLA-A24 (human

Identifying a cell that differentiates into a metastatic cancer cell, useful for preventing metastatic cancer, comprises identifying a mutated fibronectin in the cell.
                                                                                                                                                                                                                                                                                        The invention comprises a method for identifying a cell that will differentiate into a metastatic cancer cell, the method involves identifying a mutated fibronectin in the cell. The method of the invention is useful for preventing metastatic cancer. The present amino acid sequence represents a Class I HLA-restricted widely expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 36; DB 8; Length 9;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to allergic reaction suppressors, comprising a peptide which originates from the same antigenic substance as the antigenic substance inducing the (peptide-originated) allergic reaction, and containing an epitope different from the epitope participating in the induction of the allergic reaction and yet dos not induce the allergic reaction. The desensitizers or allergic reaction suppressors are useful for treating and preventing type I allergic diseases and in cancer vaccines for preventing or treating cancer. The allergic reaction suppressors are also useful for suppressing an allergic reaction or reducing immunoglobulin E antibody production, and for desensitization to antigens. This sequence represents a peptide used in the invention and corresponds to amino acids 84-92 of the cyclophilin B protein.

The invention relates to isolated Bacillus anthracis and small pox virus comptides, also known as replikins, comprising 7 to 50 amino acids including at least one lysine residue located six to ten residues from a second lysine residue, at least one histidine residue, and at least 6% including at least one histidine residue, and at least 6% second lysine residues. The peptides were identified using the 3-point-recognition method and based on the replikin sequence isolated from glioblastoma cells malignin peptide which is of non-human origin. Also included are anti-replikin antibodies (or antibody cocktail), a method of stimulating the immune system of a subject to produce antibodies to said molecule complementary to a manaly pox comprising administering an effective amount of at least one or more Bacillus anthracis or small pox replikin anthracis polypeptide (e.g. Anthrax Lethal Factor Protein pX01-07) complementary to a manaly encoding a Small Pox virus polypeptide (e.g. Anthrax Lethal Factor Protein pX01-07) complementary to a manaly encoding a Small Pox virus polypeptide (e.g. Surface Antigen S Precursor Protein comprising a replikin sequence. The peptides are useful for stimulating the immune system of a subject to produce antibodies that bind specifically to Anthrax or small pox produce antibodies that bind specifically to Anthrax or small pox of anthrax or small pox. The peptides are useful for sequence is a replikin sequence isolated by the 3-point-recognition system and sharing structural similarity with the replikin sequence isolated from sequence isolated from the replikin sequence isolated from the sequence isolated by the 3-point solated from the sequence isolated by the 3-point solated from the sequence isolated by the 3-point solated from the sequence isolated by the 3-point sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
Isolated Bacilius anthracis and small pox virus peptides (I), also known as replikins, useful for formulating vaccines for treating anthrax or small pox, comprise 7 to 50 amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        . 0

The peptides are useful for stimulating the immune system, and for targeting, labelling or destroying replikin-containing organisms. The computer-readable mediums are useful for identifying a protein or peptide containing a replikin or recognin sequence. This is the amino acid sequence of a replikin peptide identified in the invention

The computer-readable mediums are useful for identifying a protein or peptide containing a replikin or recognin sequence. This is the amino acid sequence of a replikin peptide identified in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New replikins or recognin peptides, useful for stimulating the immune system, and for targeting, labeling or destroying replikin-containing
            likins or recognin peptides, useful for stimulating the immune and for targeting, labeling or destroying replikin-containing
                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated Plasmodium falciparum peptide or an influenza virus peptide. The composition and methods are useful in diagnosing, preventing or treating influenza virus infection or malaria. Also disclosed is an influenza virus vaccine comprising at least one isolated Replikin present in the haemagglutinin protein of an emerging strain of influenza virus and a pharmaceutical carrier and/or adjuvant and a malaria vaccine comprising at least one isolated P. falciparum Replikin and a pharmaceutical carrier. The present sequence represents the amino acid sequence of a Replikin sequence.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: This protein binds either strand of the telomeric DNA as well as unimolecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 4
PT0228
Ig heavy chain CDR3 region (clone 1-112) - human (fragment)
C; Species: Homo sapiens (man)
C; Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 16-Aug-1996
C; Accession: PT0228
